CHANGES IN PRACTICALS

UNEB has also made changes in practical examination papers, instead of learners following given instructions to test chemicals and record what they see, now students must undertake scientific investigations.

Here students will be required to follow a specific science method approach and give the aim of the investigation, the hypothesis and procedure. Thereafter, the learner will have to record the results. In addition, students will be required to analyze the results and give a conclusion after the scientific investigation.

Just like in science subjects which have two papers each (save for mathematics) each of the vocational subjects will have a theory and a practical paper.

This will affect students who will offer vocational subjects such as agriculture, ICT (Information and Communication Technology), Technology and design, performing arts, nutrition and food technology, Physical education and entrepreneurship.
