### **SECTION A**

# Answer all the items in this section in the spaces provided.

## Item 1.

Jane, a passionate farmer has been attending to her potato garden with care. On one fateful day, a sudden hailstorm striked her garden, leaving behind a trail of destruction. She worried about her family's food security and wonders how she can save the situation. Their delicate leaves are torn, and the stems bear scars from the impact. The once-promising flowers lie scattered on the ground. Jane fears that this damage will affect the tuber formation. She knows that potatoes are a staple food in her family's diet, and a poor harvest could lead to hunger and hardship.

# **SECTION B**

# Part 1

Answer only one item from this part.

# Item 4

The government of Uganda has encouraged foreigners to invest in the mining industry in order to create jobs for citizens. While this initiative may lead to short-term economic growth and employment opportunities, it is also likely to pose significant challenges in the long run.

### Task

Explain to the community the environmental challenges they are likely to face and how the natural resources are likely to be affected. Advise on how to minimize the effects of the challenges and the benefits thereafter.

#### Item 5

With increase in population, Agricultural land is becoming limited and consequently causing food shortage. In an attempt to increase on productivity farmers are applying Agro-chemicals. Scientists have argued that the use of Agro-chemicals will negatively impact on the environment in the long run. The ministry of Agriculture and animal husbandry is now in dilemma and yet want to promote food security.

#### Task

Justify the concern raised by the scientists to the ministry and advise farmers on how they can still increase food security. (15 scores)

#### Part II

Answer only one item from this part.

#### Item 6

Sarah, a senior one girl was experiencing general body weakness a week towards school interhouse athletic competitions and thus was scared that she may not participate in these competitions. The school nurse didn't find her with any disease and advised her to first eat before engaging in any sports activities especially on the competitions day, which she did by taking a meal of posho and beans. After resting for about an hour, she felt stronger and managed to even win her race. However, after the competition Sarah experienced deep breathing and muscle pain causing her to walk with a lot of difficulty.

### Task:

Describe the process that led to the success of Sarah and why she experienced deep breathing and difficulties in walking thereafter. How did she eventually recover? (15 scores)

#### Item 7

Jack, a high school student, is a passionate athlete who excels in basketball. He recently started a rigorous training program to improve his performance on the court. Despite eating a diet rich in carbohydrates, proteins, and vitamins recommended by his coach, Jack often experiences fatigue and shortness of breath during intense basketball practices. He notices that his recovery time after workouts is longer than usual, hindering his progress and overall performance on the court and that he doesn't urinate much after playing even after drinking water.

## Task:

Identify the roles of the processes / body parts involved in Jack's metabolic reactions. Explain the biological causes of the events experienced by Jack and explain how they are overcome.

(15 scores)
